PROFESSIONAL SUMMARY

Senior Frontend Developer with **8+ years** of experience in React, Next.js, Vue and TypeScript, all in B2B SaaS. Core strengths are micro-frontend architecture, web performance, testing at scale and reusable design systems. Measured outcomes include a **40%** reduction in data-fetch latency, **60%** fewer build failures across **25+ CI/CD pipelines**, and Core Web Vitals Green with **25%** faster initial load. Leads a cross-functional **squad of 8** and sets the frontend standards used by **15 engineers**.

WORK EXPERIENCE

NEXUS | Isfahan, Iran | Senior Frontend Developer

Apr 2023 – Present

A 50–100 employee B2B SaaS company. The product is an enterprise collaboration workspace covering team chat, work calendar, video meetings, tasks, tickets and AI-generated meeting recaps for 30,000+ users.

- Led the frontend rebuild of the collaboration suite for **30,000+ active users**, bringing in Zustand, React Query and IndexedDB for offline-first behavior; data-fetch latency fell **40%**.
- Split the product into a Module Federation micro-frontend estate of **6+ independent modules**, trimming average deploy time by **30%** and removing cross-team release dependencies.
- Cut the regression cycle by **30%** with the company's first end-to-end test suite in Playwright, written against user stories, and held unit coverage above **60%** with Jest and React Testing Library.
- Diagnosed the causes of recurring build failures, then containerized services with Docker across **25+ CI/CD pipelines**, dropping build failures by **60%**.
- Initiated and shipped the AI meeting-recap feature, a post-meeting summary page sent to attendees by link, now producing **300+ recaps per month**.
- Defined the frontend standards and review practice adopted across a **15-engineer team**, and ran weekly sessions on advanced React patterns and AI tooling, raising team velocity by **35%**.

KASRA | Isfahan, Iran | Frontend Developer

Apr 2018 – May 2023

A 200–300 employee B2B workforce-management software provider serving 3,000+ enterprise clients and 100,000+ end users.

- Migrated **4+ legacy applications** off classic ASP.NET inside the .NET MVC host — **3+ Razor projects** to Angular single-page applications (payroll, work-calendar), one jQuery/Razor frontend to React — cutting screen-development time and enabling client-side computation the Razor stack could not support.
- Created **10+ mission-critical admin dashboards** in React and Angular for a product serving **100,000+ users**.
- Improved initial page load by **25%** and reached Core Web Vitals Green by auditing bundle composition to isolate the heaviest render-blocking dependencies, then code-splitting the routes.
- Traced **58%** of defects to untyped shared state, then migrated the monolithic frontend to TypeScript and Redux Toolkit to eliminate that defect class, cutting new-engineer onboarding by **2 weeks**.
- Developed a geofenced attendance module with Leaflet and Mapbox, lifting use of location-aware features by **30%**.
- Reduced post-release defects by **20%** across a product used by **3,000+ clients** by putting structured code review and Jest unit testing in place.

PROJECTS

Alkafeel ERP Ecosystem | Iraq, remote | *Senior Frontend Developer* Mar 2025 – Nov 2025

- Developed a Vue.js Module Federation architecture enabling independent deployments for **5+ teams**, eliminating cross-team release dependencies and system-wide downtime.
- Automated HR and administrative request workflows, replacing email chains and manual data re-entry with in-app submission, automated approval routing and real-time SignalR notifications for approvals and company-wide announcements.
- Built **50+ admin and back-office screens** across the HR and administrative modules, covering request forms, approval queues, permission-aware data tables and role-based views.

EDUCATION

University of Isfahan | Isfahan, Iran | *BSc Computer Engineering* 2014 – 2018

Capstone project: a real-time autoclave monitoring system focused on IoT data visualization.

SKILLS

Frontend Frameworks & Languages: React.js, Next.js (App Router), Vue.js, Angular, TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS.

Architecture & State Management: Micro-Frontends, Module Federation, Clean Architecture, Feature Slice Design, Domain-Driven Design, SOLID, Redux Toolkit, Zustand, TanStack Query.

Testing & Quality: Playwright (E2E), Jest, React Testing Library, Vitest, TDD, Storybook, Core Web Vitals, Accessibility (WCAG).

Tools & DevOps: Docker, CI/CD, Git, Gitflow, GitHub Actions, Webpack, Vite, pnpm, Sentry.

UI & Styling: Tailwind CSS, Material UI, Ant Design, Styled Components, Radix UI, Responsive Web Design.

APIs & Real-time: REST, GraphQL, WebSocket, SignalR, IndexedDB, Mapbox GL JS, Leaflet.

AI & Productivity: GitHub Copilot, Cursor, Claude, Gemini, Jules.

LANGUAGES

English: professional working proficiency (C1) **Persian:** native
